

TS-315 Triple Axis Accelerometer and Gyro Breakout – MPU-6050 User Guide

- Raspberry Pi Setup (for Raspbian)
 - Installing I2C Drivers
 - Open the modules file for editing:
`sudo vi /etc/modules`
 - Add the following lines to the bottom of the file:
`i2c-bcm2708`
`i2c-dev`
 - Save the file
 - Reboot the Raspberry Pi
 - Open the blacklists file for editing:
`sudo vi /etc/modprobe.d/raspi-blacklist.conf`
 - Look for the following 2 lines:
`blacklist i2c-bcm2708`
`blacklist i2c-bcm2708`
 - If found, delete them.
 - Save the file
 - Reboot the Raspberry Pi
 - Hooking up the Sensor
 - Connect the following pins from the Raspberry Pi GPIO to the corresponding [TS-315 Triple Axis Accelerometer and Gyro Breakout – MPU-6050](#) pins
 - Raspberry Pi GPIO Pin 1 (3.3V) to TS-315's VCC
 - Raspberry Pi GPIO Pin 3 (SDA) to TS-315's SDA
 - Raspberry Pi GPIO Pin 5 (SCL) to TS-315's SCL
 - Raspberry PI GPIO Pin 6 (GND) to TS-315's GND
 - Install I2C Tools
 - `sudo apt-get install i2c-tools`
 - Run I2C Tools (to view the TS-315's output)
 - `sudo i2cdetect -y 1`

- The output should look as follows showing all I2C devices hooked up to the Raspberry Pi. In this case, TS-315 was detected at address 0x68.

	0	1	2	3	4	5	6	7	8	9	a	b	c	d	e	f
00:																
10:	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	
20:	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	
30:	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	
40:	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	
50:	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	
60:	--	--	--	--	--	--	--	--	--	68	--	--	--	--	--	
70:	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	

- Poll address 0x68 for data and retrieve the value in register 0x75

```
sudo i2cget -y 1 0x68 0x75
```

- Congratulations! You're Raspberry Pi is now set up for the [TS-315 Triple Axis Accelerometer and Gyro Breakout – MPU-6050!](#)

- Arduino Setup:

- Hooking up the Sensor
 - Connect the following pins from the Arduino UNO to the corresponding [TS-315 Triple Axis Accelerometer and Gyro Breakout – MPU-6050](#) pins
 - Arduino UNO Pin 3.3V to TS-315's VCC
 - Arduino UNO Pin A4 (SDA) to TS-315's SDA
 - Arduino UNO Pin A5 (SCL) to TS-315's SCL
 - Arduino UNO Pin GND to TS-315's GND
- Download and Open the following sketch in your Arduino IDE:
 - <http://tinkersphere.com/documents/TS315MPU6050sketch.ino>
- Congratulations! You're Arduino UNO is now set up for the [TS-315 Triple Axis Accelerometer and Gyro Breakout – MPU-6050!](#)

- TS-315 Schematic:
